班	级_软工六班

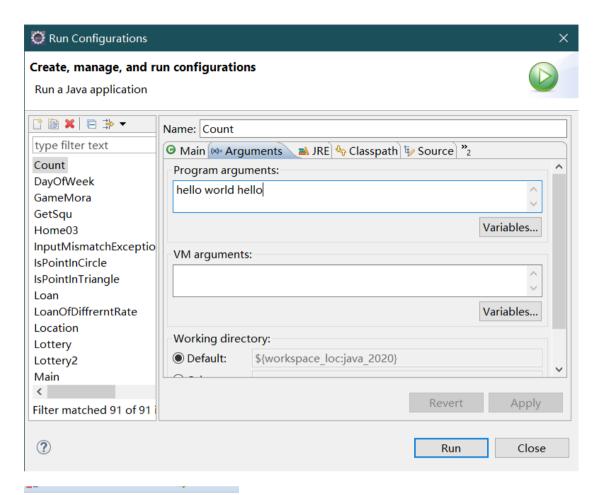

一、实验要求

Please count the number of each string in the input args and output them with the format "<string>=<the number of string>"

二、源代码

```
package Count;
import java.util.HashMap;
import java.util.Map;
public class Count {
    public static void main(String[] args) {
         Map<String,Integer> count = new HashMap<>();
         for(int i=0;i<args.length;i++){</pre>
              if(count.containsKey(args[i])){
                   int temp = count.get(args[i])+1;
                   count.put(args[i], temp);
              }
              else {
                   count.put(args[i], 1);
              }
         }
         for(Map.Entry<String, Integer> entry:count.entrySet()){
              System.out.println(entry.getKey() + "=" + entry.getValue());
         }
    }
}
```

三、实验结果

<terminated> Count [Java Applicatio

world=1

hello=2
